Syracuse University

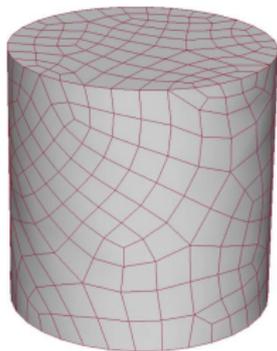

- EGADS tessellation for structural analysis
 - Regularized quad meshing
- Global EGADS tess parameters
 - Transfinite interpolation
- Local Mesh_Sizing parameters
 - Tess Parameters
 - Edge Point Count
- Suggested Exercises

- CAD surface mesh generator
- Originally targeted generating input tessellations for Cart3D
 - Goal – minimal counts that best represent the geometry
 - Produce a watertight discrete tessellation even when the BRep has large gaps
 - All vertices provide xyz and the appropriate geometric parameters
 - Useful for visualization
- No size gradation
 - Watertight is more important than meeting any meshing criteria
 - Can produce strongly anisotropic elements
 - Often not appropriate for tetrahedral meshers that use traditional Delaunay schemes

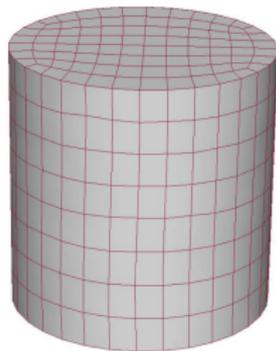

- Triangles split into 3 quads
- Basic: swapping, collapsing, splitting
- Advanced: Double Swap, Swap Collapse, Double Split
- **EDGE** tessellation fixed, and doubled
 - **EDGE** tessellation drives quading

Triangles split

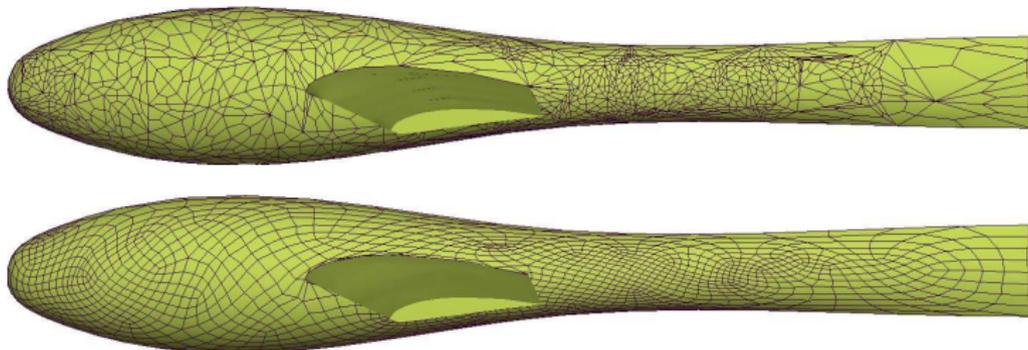

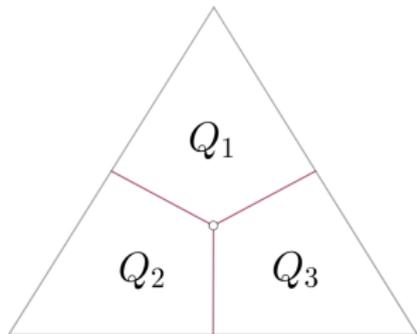

Basic operations

Advanced operations

- Triangles split into 3 quads
- Basic: swapping, collapsing, splitting
- Advanced: Double Swap, Swap Collapse, Double Split
- **EDGE** tessellation fixed, and doubled
 - **EDGE** tessellation drives quading

EGADS Tess AIM Documentation

- Full skin with spar and ribs structures
- Box structure with spars and ribs using capsIgnore

ESP/viewStructure.udc

```
# Mark Faces near leadingEdge and trailingEdge
# so that they are not part of wing box
```

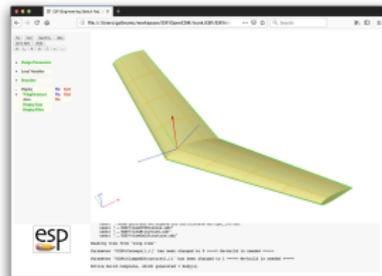

```
UDPRIM    editAttr filename <<
FACE ADJ2EDGE tagType=leadingEdge
SET      capsIgnore=true

FACE HAS   tagType=trailingEdge
SET      capsIgnore=true

FACE ADJ2FACE tagType=trailingEdge
ANDNOT HAS tagType=rib
ANDNOT HAS tagType=tip
SET      capsIgnore=true

FACE ADJ2EDGE tagType=trailingEdge
SET      capsIgnore=true
```

```
>>
```

- Full skin with spar and ribs structures
- Box structure with spars and ribs using capsIgnore

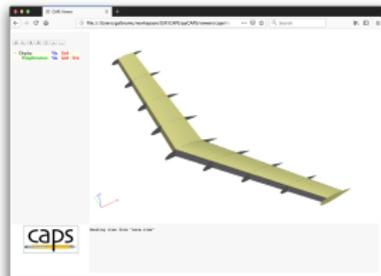

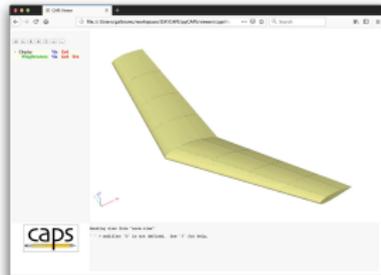

session09/tess_1_Geom.py

```
# Enable the structural mode with the full skin
wing.setGeometryVal("VIEW:Concept"      , 0)
wing.setGeometryVal("VIEW:ClampedStructure", 1)
wing.setGeometryVal("VIEW:BoxStructure"  , 0)
```

```
# View the full geometry
wing.viewGeometry()
```

```
# Enable the structural mode for just the box
wing.setGeometryVal("VIEW:Concept"      , 0)
wing.setGeometryVal("VIEW:ClampedStructure", 1)
wing.setGeometryVal("VIEW:BoxStructure"  , 1)
```

```
# View the box geometry
wing.viewGeometry()
```

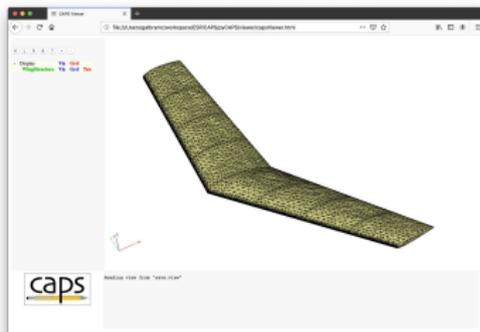

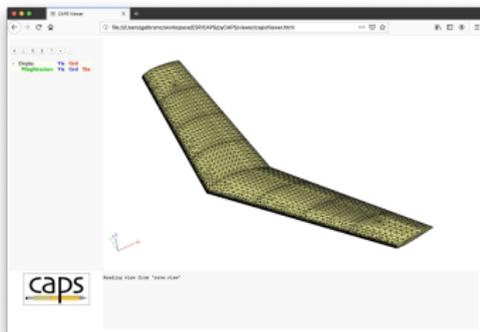

- EGADS tessellation for structural analysis
 - Regularized quad meshing
- Global **EGADS** tess parameters
 - Transfinite interpolation
- Local Mesh_Sizing parameters
 - Tess Parameters
 - Edge Point Count
- Suggested Exercises

- Attempts to Isolate 3 or 4 “sides”
 - Only single LOOP
 - **FACES** with more than 4 **EDGES** are analyzed to see if multiple tt EDGES can be treated as a single “side”
- Disable TFI to see impact of tessellation parameters

session09/tess_2_TFI_Templates.py

```
# Dissable TFI and Templates that generate "structured" triangular meshes  
tess.setAnalysisVal("TFI_Templates", False)
```

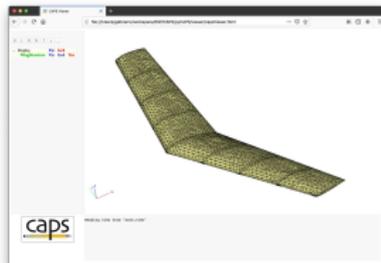

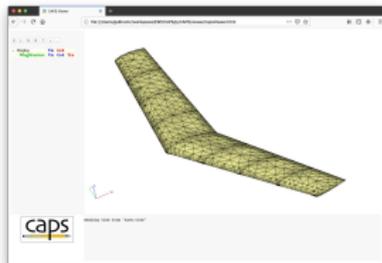

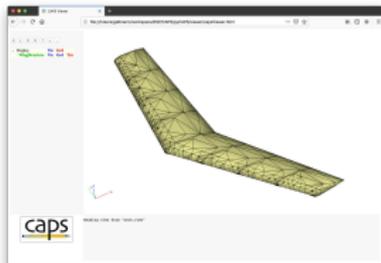

- maxLength and deviation scaled by capsMeshLength

session09/tess_3_Params.py

```
maxLength = 0.10 # bound on maximum segment length (0 - any length)
deviation = 0.01 # deviation from triangle centroid to geometry
dihedral = 15 # maximum interior dihedral angle between triangle facets
```

```
# Set EGADS body tessellation parameters
tess.setAnalysisVal("Tess_Params", [maxLength, deviation, dihedral])
```

```
# Impact of changing bound on the maximum segment
for maxLen in [0, 0.3, 0.1]:
    tess.setAnalysisVal("Tess_Params", [maxLen, 0.1, 30])
```

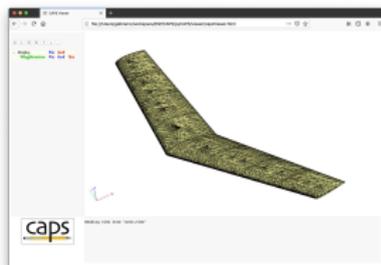

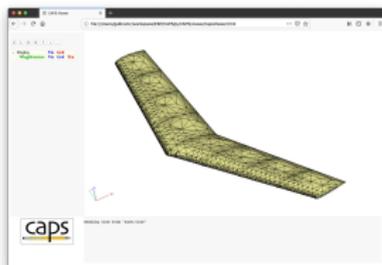

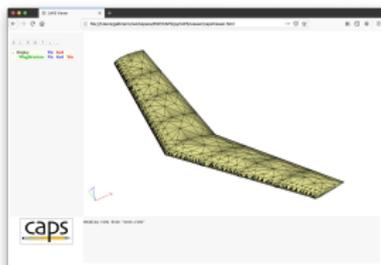

- maxLength and deviation scaled by capsMeshLength

session09/tess_4_Params.py

```
maxLength = 0.10 # bound on maximum segment length (0 - any length)
deviation = 0.01 # deviation from triangle centroid to geometry
dihedral = 15 # maximum interior dihedral angle between triangle facets
```

```
# Set EGADS body tessellation parameters
tess.setAnalysisVal("Tess_Params", [maxLength, deviation, dihedral])
```

```
# Impact of changing deviation
for dev in [0.01, 0.005, 0.001]:
    tess.setAnalysisVal("Tess_Params", [0, dev, 30])
```

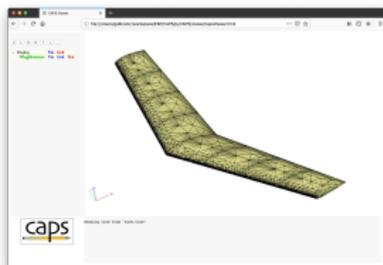

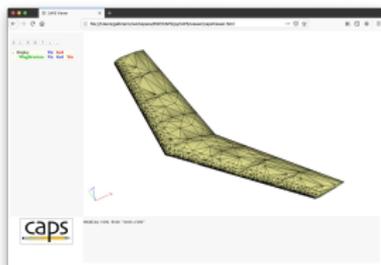

- maxLength and deviation scaled by capsMeshLength

session09/tess_5_Params.py

```
maxLength = 0.10 # bound on maximum segment length (0 - any length)
deviation = 0.01 # deviation from triangle centroid to geometry
dihedral = 15 # maximum interior dihedral angle between triangle facets
```

```
# Set EGADS body tessellation parameters
tess.setAnalysisVal("Tess_Params", [maxLength, deviation, dihedral])
```

```
# Impact of changing dihedral
for dihedral in [20, 10, 5]:
    tess.setAnalysisVal("Tess_Params", [0, 0.1, dihedral])
```

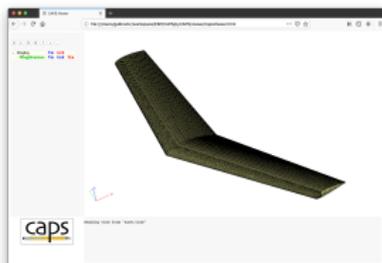

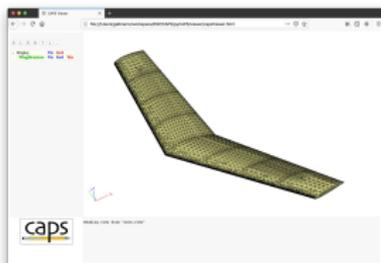

- Here, spanwise mesh spacing driven by leading edge spacing
- Meshing occurs prior to removing faces with `capsIgnore`
- Only control over Quad tessellation is **EDGE** tessellation
 - Tessellation parameters set global **EDGE** tessellation
 - `Mesh_Sizing` parameters set local **EDGE** tessellation

session09/tess_6_TriQuad.py

```
# Triangle tessellation  
tess.setAnalysisVal("Mesh_Elements", "Tri")
```

```
# Regularized quad tessellation  
tess.setAnalysisVal("Mesh_Elements", "Quad")
```

- EGADS tessellation for structural analysis
 - Regularized quad meshing
- Global EGADS tess parameters
 - Transfinite interpolation
- Local Mesh_Sizing parameters
 - Tess Parameters
 - Edge Point Count
- Suggested Exercises

- `numEdgePoints`: Specific number of points on EDGE (min 2)
- `edgeDistribution`: Even or Tanh
- `initialNodeSpacing`: Spacing at beginning and end of EDGE
- `tessParams`: Local tessellation parameters on EDGES or FACES [Max length, deviation, dihedral angle]

Regularized Quads

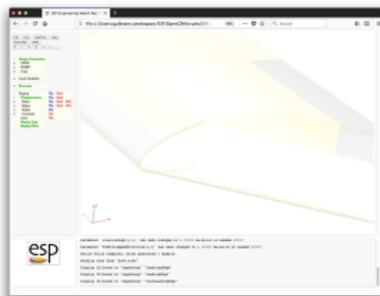

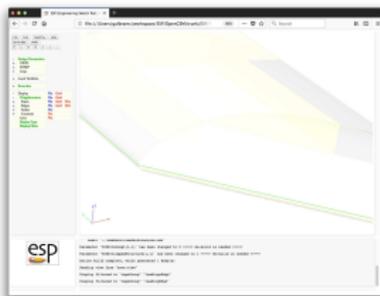

- EDGE points always adjusted to maximize TFI
- Choosing EDGE point count follows:
 - 1. Highest point count specified via `EDGE Mesh_Sizing`
 - 2. `Mesh_Sizing` point count retained over higher default point count
 - 3. Finest default point count

- Modify leading edge spacing
- Set number of points on root rib **EDGE** by leading edge

session09/tess_7_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = [{"leadingEdge"      , {"tessParams"      : [0, 0.2, 30]}},
               {"rootLeadingEdge" , {"numEdgePoints" : 2}}]

tess.setAnalysisVal("Mesh_Sizing", Mesh_Sizing)
```

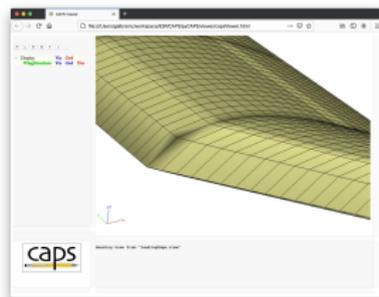

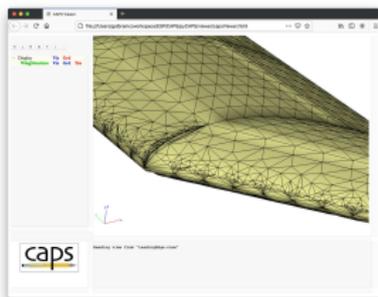

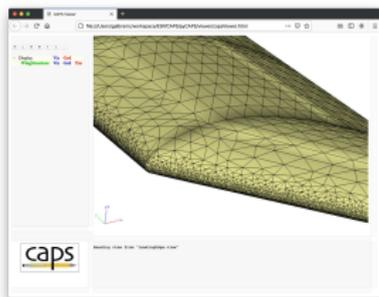

- Modify leading edge spacing
- Set number of points on root rib **EDGE** by leading edge

session09/tess_7_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = [{"leadingEdge"    , {"tessParams"    : [0, 0.2, 30]}},
               {"rootLeadingEdge", {"numEdgePoints" : 2}}]

tess.setAnalysisVal("Mesh_Sizing", Mesh_Sizing)
```

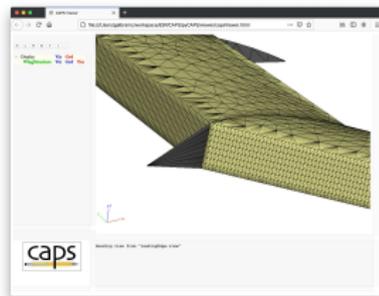

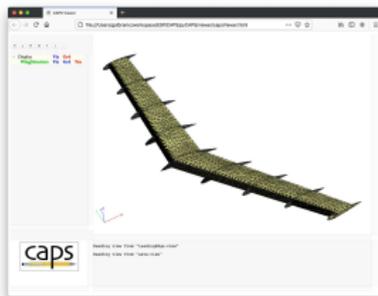

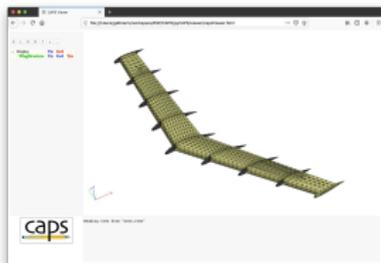

- Modify leading edge spacing
- Set number of points on root rib **EDGE** by leading edge
- Modify **FACE** parameters on wingSpar1 capsGroup

session09/tess_8_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = [{"wingSpar1"      , {"tessParams"   : [0.02, 0.1, 30]}},
               {"leadingEdge"   , {"tessParams"   : [0, 0.2, 30]}},
               {"rootLeadingEdge", {"numEdgePoints": 2}}]

tess.setAnalysisVal("Mesh_Sizing", Mesh_Sizing)
```

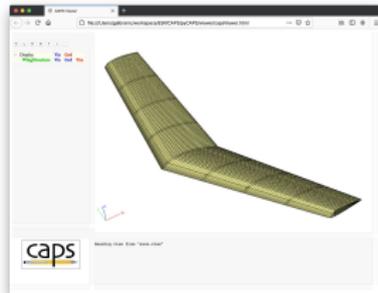

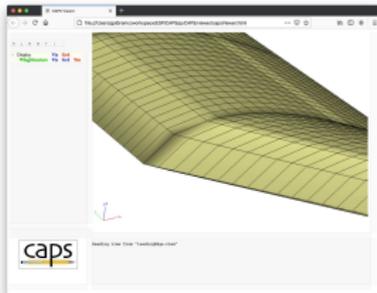

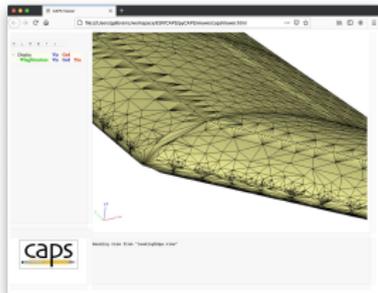

- Modify leading edge spacing
- Set number of points on root rib **EDGE** by leading edge
- Modify **FACE** parameters on wingSpar1 capsGroup

session09/tess_8_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = [{"wingSpar1"      , {"tessParams"   : [0.02, 0.1, 30]}},
               {"leadingEdge"   , {"tessParams"   : [0, 0.2, 30]}},
               {"rootLeadingEdge", {"numEdgePoints": 2}}]

tess.setAnalysisVal("Mesh_Sizing", Mesh_Sizing)
```

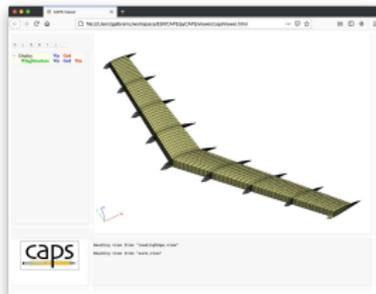

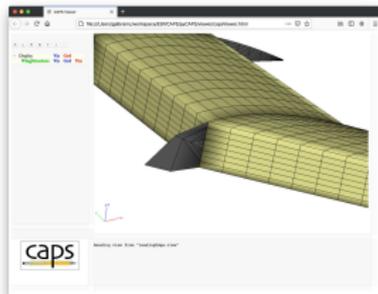

- Modify leading edge spacing
- Set number of points on root rib **EDGE** by leading edge
- Modify **FACE** parameters on wingSpar1 capsGroup

session09/tess_8_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = [{"wingSpar1"      , {"tessParams"   : [0.02, 0.1, 30]}},
               {"leadingEdge"   , {"tessParams"   : [0, 0.2, 30]}},
               {"rootLeadingEdge", {"numEdgePoints": 2}}]

tess.setAnalysisVal("Mesh_Sizing", Mesh_Sizing)
```

Tess_Params

- Modify Tess_Params for a different capsGroup

Minimal Quads

- Generate the smallest possible number of quad elements for

VIEW:Concept	0
VIEW:ClampedStructure	1
VIEW:BoxStructure	0

Specific Quads

- Generate quad meshes with approximately 2,000, 4,000, and 6,000 elements for

VIEW:Concept	0
VIEW:ClampedStructure	1
VIEW:BoxStructure	1

New capsGroup

- Add a `capsGroup` similar to `rootLeadingEdge` to the `EDGE s` on the root rib on the top and bottom of the spar.
- Use this to generate 2, 10, and 16 quads in the chordwise direction of the spar for

<code>VIEW:Concept</code>	0
<code>VIEW:ClampedStructure</code>	1
<code>VIEW:BoxStructure</code>	1

- Explore the impact of other AIM input parameters
- Create your own (optionally share it galbramc@mit.edu)
