

# Engineering Sketch Pad (ESP) Training

## Session 7: Putting it All Together

John F. Dannenhoffer, III

Syracuse University

Bob Haimes

Massachusetts Institute of Technology

Revised for v1.11

## Overview

- Multi-intent models
- Using UDCs to build aircraft components
- Assembling an aircraft
- Hand-on exercises
  - myGlider
  - myAircraft
- Course summary

## Multi-intent Models

- During the design of an aircraft, various coupled models are needed
  - different disciplines
    - structures
    - controls
    - aerodynamics
    - ...
  - different intents
    - conceptual design
    - preliminary design
    - detailed design
- There needs to be communication between these models

## Using UDCs to Build Aircraft Components

- Build a UDC for each major component type
  - wing
    - also used for tail surfaces
  - fuselage
  - duct
    - might use 2 ducts for high-bypass engine
  - pylon
    - connects ducts and wing

# esp Aircraft UDCs

intent = 3

fuselage.udc

xloc (array)  
zloc (array)  
width (array)  
height (array)  
noselist ( $8 \times 1$ )  
taillist ( $8 \times 1$ )

wing.udc

area  
aspect  
taper  
twist  
sweep  
dihedral  
thickness  
camber

duct.udc

diameter  
length  
thickness  
camber

# esp Transport Fuselage for 2 Intents

intent = 1

intent = 3

## Wing for 3 Intents

intent = 1

intent = 2

intent = 3

## Duct for 3 Intents

intent = 1

intent = 2

intent = 3

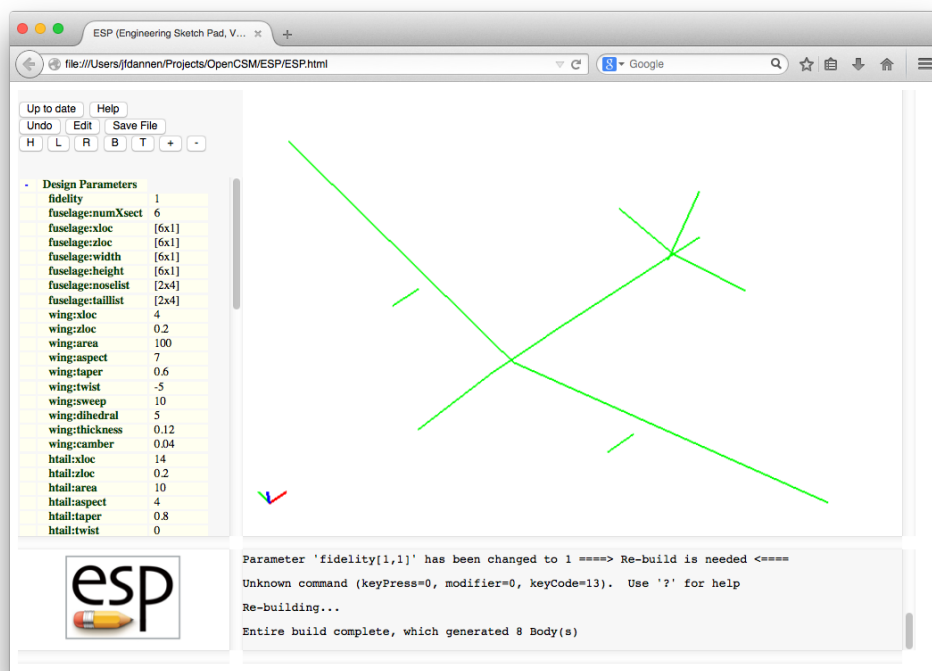

# Combine UDCs into Aircraft

## ■ Majors steps:

- Set up global parameters
- Set up parameters for, and position of, each component
- Call each UDC (perhaps multiple times)
- If not first component
  - combine with previous components

# myPlane at intent=1

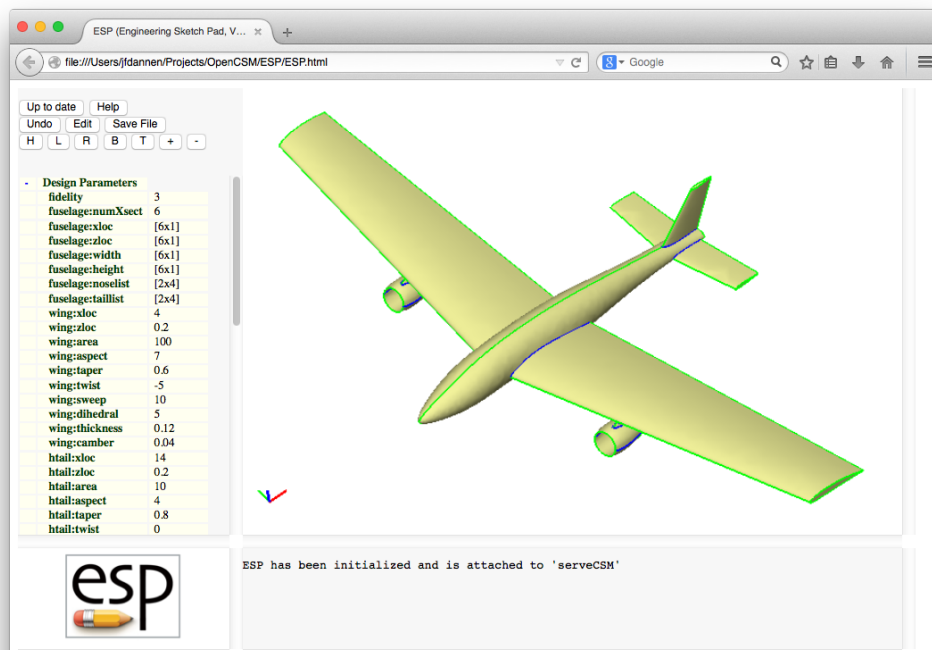

## myPlane at intent=2

## myPlane at intent=3

Outer-mold line for CFD

## Hands-on Exercises

- Run data/CAPS/myPlane
  - vary Design Parameters
  - vary intent
- Add a tip-mounted pod
  - use fuselage.udc

## Muddy Cards

- Questions / suggestions about multi-disciplinary models
- Questions / suggestions about multi-intent modes
- Overall effectiveness of course
