

CAPS Muddy Cards for Sessions 01 and 02

ESP v1.19

Marshall Galbraith

July 2021

1. Q. Can the ":" grouping syntax go more than 2 layers deep? That is, does "wing:chord:root" becoming wing.chord.root in python?
A. Yes.
2. Q. Are you able to redimension the vtail parameter via pyCAPS or is this set with the csm file only?
A. Yes, the vtail parameter can be redimensioned. f118-A.csm and f118.2_DESPMTR.py have been updated to demonstrate redimensioning an array/matrix.
