- EGADS tessellation for structural analysis
 - Regularized quad meshing
- Global EGADS tess parameters
 - Transfinite interpolation
- Local Mesh_Sizing parameters
 - Tess Parameters
 - Edge Point Count
- Suggested Exercises

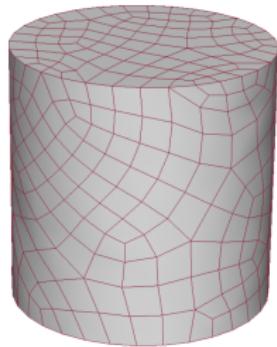

- CAD surface mesh generator
- Originally targeted generating input tessellations for Cart3D
 - Goal – minimal counts that best represent the geometry
 - Produce a watertight discrete tessellation even when the BRep has large gaps
 - All vertices provide xyz and the appropriate geometric parameters
 - Useful for visualization
- No size gradation
 - Watertight is more important than meeting any meshing criteria
 - Can produce strongly anisotropic elements
 - Often not appropriate for tetrahedral meshers that use traditional Delaunay schemes

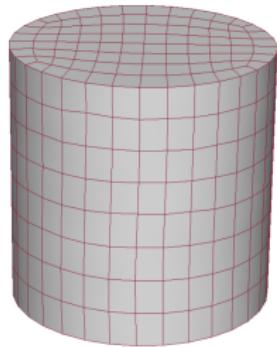

- Triangles split into 3 quads
- Basic: swapping, collapsing, splitting
- Advanced: Double Swap, Swap Collapse, Double Split
- EDGE tessellation fixed, and doubled
 - EDGE tessellation drives quading

Triangles split

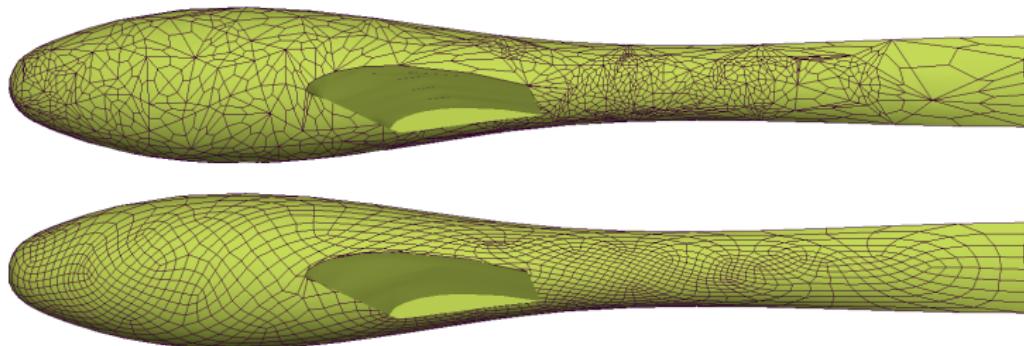

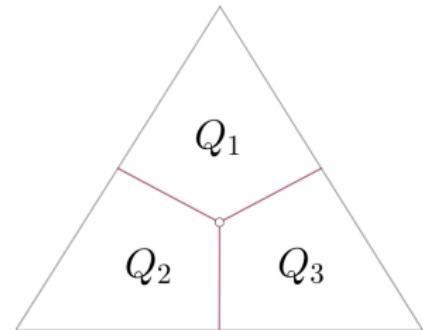

Basic operations

Advanced operations

- Triangles split into 3 quads
- Basic: swapping, collapsing, splitting
- Advanced: Double Swap, Swap Collapse, Double Split
- EDGE tessellation fixed, and doubled
 - EDGE tessellation drives quading

EGADS Tess AIM Documentation

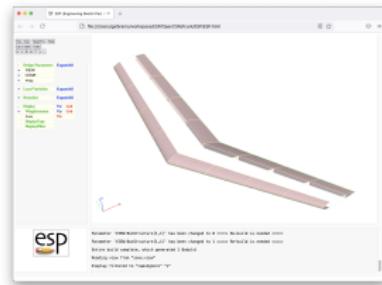

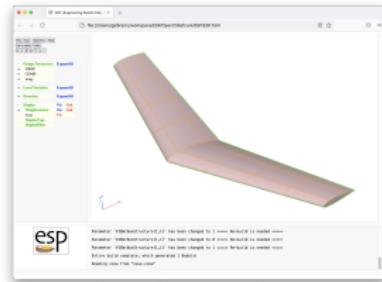

wing3.csm Geometry

- Full skin with spar and ribs structures
- Box structure with spars and ribs using `capsIgnore`
(use “keep” attribute to see what is retained)

ESP/viewStructure.udc

```
# Mark Faces near leadingEdge and trailingEdge  
# so that they are not part of wing box  
UDPRIM editAttr filename <<  
    FACE ADJ2EDGE tagType=leadingEdge  
    SET capsIgnore=true  
  
    FACE HAS tagType=trailingEdge  
    SET capsIgnore=true  
  
    FACE ADJ2FACE tagType=trailingEdge  
    ANDNOT HAS tagType=rib  
    ANDNOT HAS tagType=tip  
    SET capsIgnore=true  
  
    FACE ADJ2EDGE tagType=trailingEdge  
    SET capsIgnore=true
```

>>

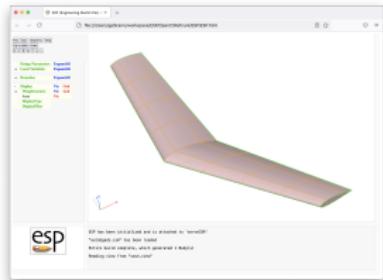

- Full skin with spar and ribs structures
- Box structure with spars and ribs using `capsIgnore`
(use “keep” attribute to see what is retained)

session09/tess_1_Geom.py

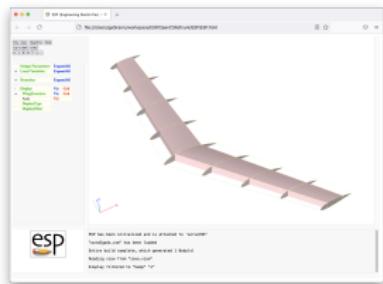

```
# Set geometry variables for structural IML/OML
wing.cfgpmtr.VIEW.Concept      = 0
wing.cfgpmtr.VIEW.ClampedStructure = 1
wing.cfgpmtr.VIEW.BoxStructure    = 0

# View the full geometry
wing.view()
```

```
# Enable the structural mode for just the box spar
wing.cfgpmtr.VIEW.Concept      = 0
wing.cfgpmtr.VIEW.ClampedStructure = 1
wing.cfgpmtr.VIEW.BoxStructure    = 1

# View the box geometry
wing.view()
```

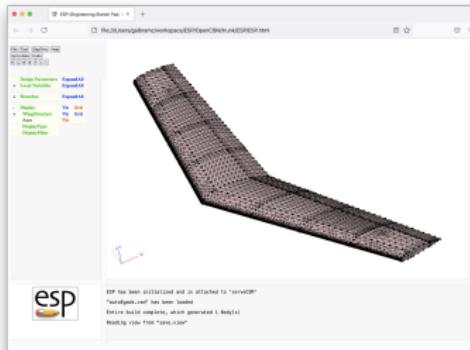

- EGADS tessellation for structural analysis
 - Regularized quad meshing
- Global EGADS tess parameters
 - Transfinite interpolation
- Local Mesh_Sizing parameters
 - Tess Parameters
 - Edge Point Count
- Suggested Exercises

- Attempts to Isolate 3 or 4 “sides”
 - Only single LOOP
 - FACEs with more than 4 EDGES are analyzed to see if multiple EDGES can be treated as a single “side”
- Disable TFI to see impact of tessellation parameters

session09/tess_2_TFI_Templates.py

```
# Disable TFI and Templates that generate "structured" triangular meshes
tess.input.TFI_Templates = False
```

EGADS Tess Parameters

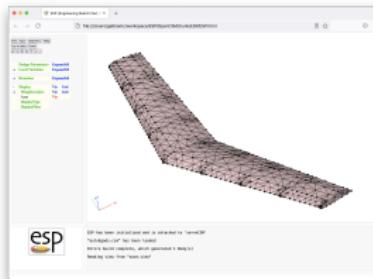

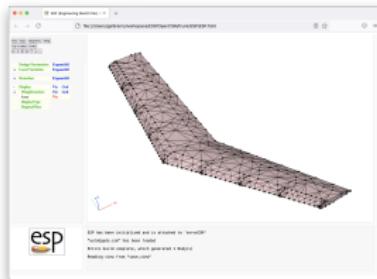

- `maxLength` and deviation scaled by `capsMeshLength`

session09/tess_3_Params.py

```
maxLength = 0.10 # bound on maximum segment length (0 - any length)
deviation = 0.01 # deviation from triangle centroid to geometry
dihedral = 15    # maximum interior dihedral angle between triangle facets

# Set EGADS body tessellation parameters
tess.input.Tess_Parms = [maxLength, deviation, dihedral]

# Impact of changing bound on the maximum segment
for maxLength in [0, 0.3, 0.1]:
    tess.input.Tess_Parms = [maxLength, 0.1, 30]
```

- maxLength and deviation scaled by capsMeshLength

session09/tess_4_Params.py

```
maxLength = 0.10 # bound on maximum segment length (0 - any length)
deviation = 0.01 # deviation from triangle centroid to geometry
dihedral = 15    # maximum interior dihedral angle between triangle facets

# Set EGADS body tessellation parameters
tess.input.Tess_Parms = [maxLength, deviation, dihedral]

# Impact of changing deviation
for deviation in [0.01, 0.005, 0.001]:
    tess.input.Tess_Parms = [0, deviation, 30]
```

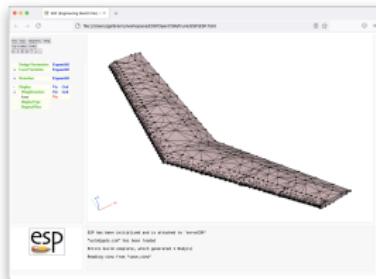

- maxLength and deviation scaled by capsMeshLength

session09/tess_5_Params.py

```
maxLength = 0.10 # bound on maximum segment length (0 - any length)
deviation = 0.01 # deviation from triangle centroid to geometry
dihedral = 15    # maximum interior dihedral angle between triangle facets

# Set EGADS body tessellation parameters
tess.input.Tess_Parms = [maxLength, deviation, dihedral]

# Impact of changing dihedral
for dihedral in [20, 10, 5]:
    tess.input.Tess_Parms = [0, 0.1, dihedral]
```

Regularized Quads

- Here, spanwise mesh spacing driven by leading edge spacing
- Meshes faces with `capsIgnore` (removed just in time)
- Only control over Quad tessellation is `EDGE` tessellation
 - Tessellation parameters set global `EDGE` tessellation
 - Mesh_Sizing parameters set local `EDGE` tessellation

session09/tess_6_TriQuad.py

```
# Triangle tessellation
tess.input.Mesh_Elements = "Tri"
```

```
# Regularized quad tessellation
tess.input.Mesh_Elements = "Quad"
```

- EGADS tessellation for structural analysis
 - Regularized quad meshing
- Global EGADS tess parameters
 - Transfinite interpolation
- Local Mesh_Sizing parameters
 - Tess Parameters
 - Edge Point Count
- Suggested Exercises

Mesh_Sizing Parameters

- **numEdgePoints**: Specific number of points on EDGE (min 2)
- **edgeDistribution**: Even or Tanh
- **initialNodeSpacing**: Spacing at beginning and end of EDGE
- **tessParams**: Local tessellation parameters on EDGES or FACES [Max length, deviation, dihedral angle]

Regularized Quads

- EDGE points always adjusted to maximize TFI
- Choosing EDGE point count follows:
 - 1. Finest specified point count set via EDGE Mesh_Sizing
 - 2. Mesh_Sizing point count retained over higher unspecified point count
 - 3. Finest unspecified point count

Mesh_Sizing Parameters on EDGES

- Modify leading edge spacing
 - `leadingEdge` and `rootLeadingEdge` `capsMesh` attributes
- Set number of points on root rib EDGE by leading edge

session09/tess_7_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = {"leadingEdge" : {"tessParams" : [0, 0.2, 30]},
               "rootLeadingEdge": {"numEdgePoints" : 2}}
tess.input.Mesh_Sizing = Mesh_Sizing
```

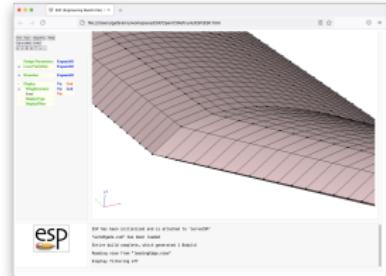

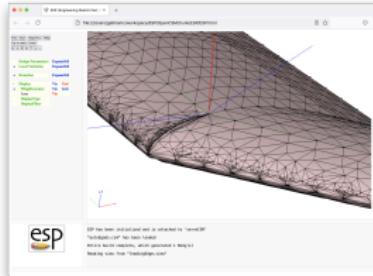

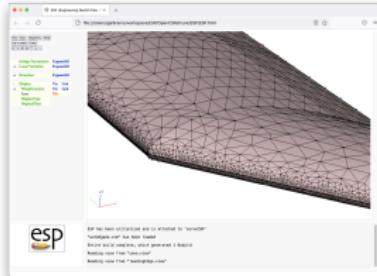

Mesh_Sizing Parameters on EDGES

- Modify leading edge spacing
 - `leadingEdge` and `rootLeadingEdge` `capsMesh` attributes
- Set number of points on root rib EDGE by leading edge

session09/tess_7_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = {"leadingEdge" : {"tessParams" : [0, 0.2, 30]},
               "rootLeadingEdge": {"numEdgePoints" : 2}}
tess.input.Mesh_Sizing = Mesh_Sizing
```

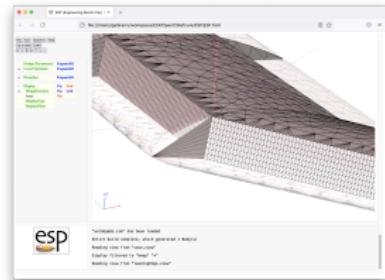

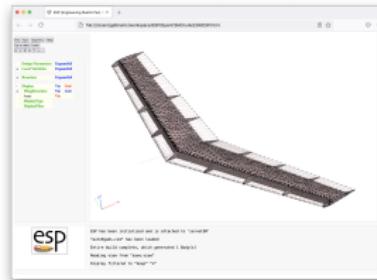

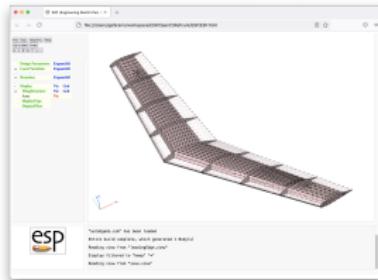

- Modify leading edge spacing
- Set number of points on root rib EDGE by leading edge
- Modify parameters on FACEs with capsMesh wingSpar1

session09/tess_8_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = {"wingSpar1"      : {"tessParams"     : [0.02, 0.1, 30]},
               "leadingEdge"    : {"tessParams"     : [0, 0.2, 30]},
               "rootLeadingEdge": {"numEdgePoints" : 2} }

tess.input.Mesh_Sizing = Mesh_Sizing
```

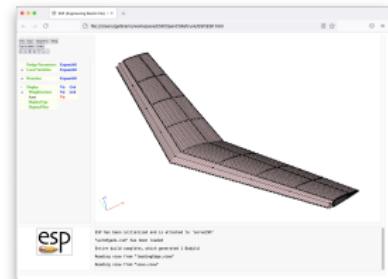

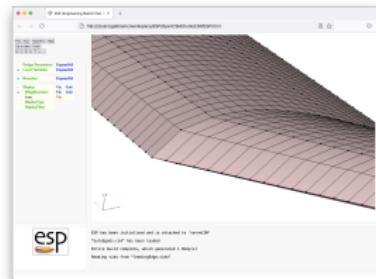

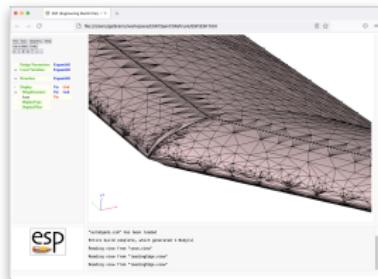

- Modify leading edge spacing
- Set number of points on root rib EDGE by leading edge
- Modify parameters on FACEs with capsMesh wingSpar1

session09/tess_8_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = {"wingSpar1"      : {"tessParams"      : [0.02, 0.1, 30]},
               "leadingEdge"    : {"tessParams"      : [0, 0.2, 30]},
               "rootLeadingEdge": {"numEdgePoints" : 2} }

tess.input.Mesh_Sizing = Mesh_Sizing
```

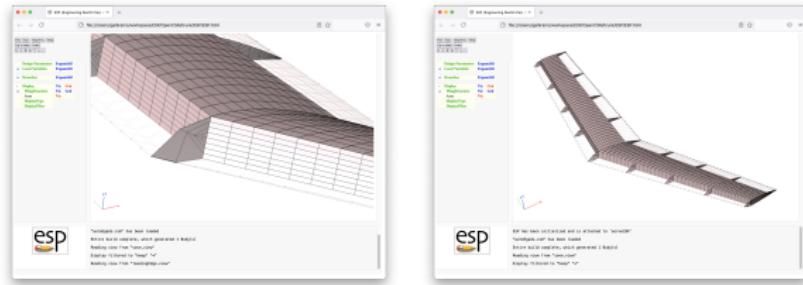

Mesh_Sizing Parameters on EDGES Cont.

- Modify leading edge spacing
- Set number of points on root rib EDGE by leading edge
- Modify parameters on FACEs with capsMesh wingSpar1

session09/tess_8_MeshSizing.py

```
# Modify local mesh sizing parameters
Mesh_Sizing = {"wingSpar1"      : {"tessParams"      : [0.02, 0.1, 30]},
               "leadingEdge"    : {"tessParams"      : [0, 0.2, 30]},
               "rootLeadingEdge": {"numEdgePoints" : 2} }

tess.input.Mesh_Sizing = Mesh_Sizing
```

Suggested Exercises

Tess_Params

- Modify Tess_Params for a different capsGroup

Minimal Quads

- Generate the smallest possible number of quad elements for

VIEW:Concept 0

VIEW:ClampedStructure 1

VIEW:BoxStructure 0

Specific Quads

- Generate quad meshes with approximately 2,000, 4,000, and 6,000 elements for

VIEW:Concept 0

VIEW:ClampedStructure 1

VIEW:BoxStructure 1

New capsGroup

- Add a `capsGroup` similar to `rootLeadingEdge` to the `EDGE`s on the root rib on the top and bottom of the spar.
- Use this to generate 2, 10, and 16 quads in the chordwise direction of the spar for

`VIEW:Concept` 0

`VIEW:ClampedStructure` 1

`VIEW:BoxStructure` 1

- Explore the impact of other AIM input parameters
- Create your own (optionally share it `galbramc@mit.edu`)
